PROJECTS

Keylogging   View in GitHub

- A sophisticated system that records keystrokes, captures desktop screenshots, and even logs conversations in real-time.With seamless precision, it tracks user activity, providing unparalleled insight into digital interactions.
- This innovative solution operates seamlessly, efficiently sending recorded keystrokes to designated users via email at regular intervals, ensuring prompt awareness and response to any developments.
- With a focus on security and accountability, our project offers peace of mind in an ever-evolving digital landscape.

Online retail application database   View in GitHub

- Proficiently designed and implemented a robust data management system encompassing product, order, customer, and transactional data, fostering a seamless shopping experience for users.
- By organizing and storing critical information, the application achieves optimal efficiency in handling retail operations.
- It is ensured that third-party involvement was restricted, thereby enhancing brand quality and maintaining strict control over the retail ecosystem.
- This initiative underscores a commitment to preserving brand integrity and fostering customer trust. Keywords: data management, product, order, customer, transaction, retail operations, brand quality, customer trust.
